

VITAL SiCa

Silicon and Calcium solution

The application of **VITAL SiCa** results in the protection against excess transpiration, without decreasing the photosynthetic activity, and prevents hydric and saline stress and sunburn. When treating cereals and grass with **VITAL SiCa**, the crops are hardened and lodging prevented. Moreover, **VITAL SiCa** acts as a growth stimulus, given that it promotes photosynthetic activity.

Dose and instructions for use:

VITAL SiCa is applied via foliar feeding and the dose is 1-2 liter/hectoliter and sprayed over the above-ground parts of the plant, using enough volume to ensure the complete covering of the trunk, branches and leaves.

Application season

On horticultural crops, fruit-trees and ornamental plants, it can be applied throughout the vegetative cycle. The most favorable time for the application is during the fattening of the fruits.

GUARANTEED ANALYSIS

Silicon Dioxide (SiO ₂)	26% w/w
Calcium (CaCO ₃)	12% w/w
Magnesium Oxide (MgO)	0,24% w/w
Iron (Fe ₂ O ₃)	0,14% w/w
