

VITAL SALT

Complexed Calcium solution.

VITAL SALT is a Calcium deficiency corrector chelated using lignosulfonic acid applied via foliar application and fertigation with a wide array of uses, such as correcting Calcium deficiencies, as well as repairing saline soils and saline water. **VITAL SALT** exchanges sodium for calcium and, as a result, the sodium gets buried in the lower layers of the soil.

Dose and instructions for use:

Foliar application: 400 cc/100 l of water and repeat depending on Calcium required.

Fertigation: 40-80 L/ha per year in different irrigations (correct saline soil), 25-50 L/m³ of water, depending on EC (correct saline water), or 8-12 L/ha and irrigation (correct calcium deficiency).

Application season

Its most suitable application season is from transplant or sprouting until the end of the vegetative cycle, although it can be applied throughout the cycle.

GUARANTEED ANALYSIS

Calcium oxide (CaO) soluble in water	9,31% w/w
--------------------------------------	-----------

Calcium oxide (CaO) complexed using lignosulfonic acid	9,06% w/w
--	-----------
