

VITAL GROW

Potassium soup

VITAL GROW is a mixture of a dispersant and surfactant product because of its content of fatty acids with fitofortificant properties. This product has the special property of preventing the attack of many insects because of its proper preparation of the surface of the leaf.

Additionally, this product washes molasses from the leaves of the plants and trees when sprayed at high pressure. Molasses are produced by sucking insects and the application of this product decreases their natural defences.

Dose and instructions for use:

Through the leaf: 250-500 ml/100 liters of water.

Through the leaf: distributed over the aboveground parts of the plant, diluting it previously with the adequate quantity of water, high pressure and thin drop.

GUARANTEED ANALYSIS

Potassium soup from fatty acids	50% w/v
--	----------------

Application season

In general, all kind of crops (citrus-trees, olive-trees, vineyard, vegetables and fruit-trees in general. It is recommended its application throughout the vegetative cycle.
